

# HANGING 2D WORK

## TOOLS:

- Tape Measure
- Pencil & Painters Tape
- Scratch Pad/Paper
- Level
- Hammer
- Proper Hardware

## TAKE MEASUREMENTS:

- A.** Total HEIGHT
- B.** Divide by 2 to get CENTER of ARTWORK
- C.** BOTTOM of TOP of D-RING to TOP of ARTWORK
- D.** CENTER of D-RING to CENTER of D-RING
- E.** SIDE of ARTWORK to CENTER of D-RING

- Wash hands and/or wear gloves when handling ARTWORK.
- Carefully place ARTWORK against wall (FACE IN); add protective layer between wall and ARTWORK.
- Decide the CENTER point for the piece. We typically hang ARTWORK at a midpoint of 56-62 inches (CENTER of piece on the wall - measured from the floor).
- MARK w/ tape horizontal location on wall. Work LEFT - RIGHT, or vice versa. (If you MARK RIGHT side of where ARTWORK goes on wall, then work LEFT - RIGHT on BACK of ARTWORK).
- SUBTRACT (**C.**) from (**B.**); then ADD your CENTER measurement:  
eg. (**C.**) = 10; (**B.**) = 15; **CENTER** = 60 in. |  $10 - 15 = 5 + 60 = 65$  in.  
65 in. (from the floor) is where the TOP of your first D-RING will be placed on the wall.
- LOCATE horizontal MARK for D-RINGS: From tape on wall, MARK measurement of FRAME to CENTER of D-RING (**E.**). Match up with HEIGHT measurement. MARK a small "X" on wall. This is location for RIGHT D-RING (or LEFT when working from back of ARTWORK).
- From this MARK add measurement from D-RING to D-RING (**D.**) to LEFT of current MARK. Match up horizontal measurements with LEVEL; DO NOT measure from floor.
- Carefully HANG ARTWORK on wall. Carefully place a LEVEL on TOP of ARTWORK to check LEVEL. Make adjustments as necessary.
